## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12, drawn to a method of producing a boiled green soybean, classified in class 426, subclass 634.
- II. Claims 13-15, drawn to a frozen product of green soybean, classified in class 426, subclass 634.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the product may be made by a process using a vacuum packing method or a gas replacing method as set forth in Japanese

Unexamined Patent Application Publication No. 56-1846. In addition, the product may also be prepared by applying food coloring material to the soybeans to maintain the color desired.

3. Because these inventions are distinct for the reasons given above and the search strategy required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
